Financial Sector
  • Banking

Android / Kotlin Multiplatform developer

For the first six months I worked in the core team of a new mobile bank - was involved in the development of new features, the implementation of various animations (custom behaviors for coordinate layout), and took part in moving from a monolith to a multi-module application architecture.

Then I switched to developing a separate library on Kotlin Mutliplatform, containing the business logic of the server-driven part of the main application (which was also shared on iOS) + library on android for displaying ui.
During the year I developed these projects solo from scratch. The results were excellent and the team was expanded to five people.

Gained experience in development from scratch, being fully responsible for the result + experience in managing a small team of developers.

September 2018 — October 2019
1 year 2 months

Duotek
Android developer

Projects (solo development):

- A mobile inventory accounting application for S7 Airlines for hand-held terminals (Chainway C72-U1T1) and industrial tablets (RFID UHF IQTAB8), which allows forwarders and flight attendants to quickly count inventory on board.
Coroutines for implementing work with SDK devices for scanning, Room, Retrofit. MVVM architecture. Offline mod.
(https://duotek.ru/portfolio/s7)

- Client application for order automation
household services, electrical, plumbing, minor repairs, etc.
Classic MVVM application using coroutines and server-driven ui
